

# NEW ELITE SERIES

## KLONE SYSTEMS WITH VENTILATED DOME

TurboKlone Elite Series Commercial Level propagation systems are specifically designed for serious growers.

### IT'S JUST SO COOL!

The fan system provides constant oxygen to the growing chamber and combats high temperatures by circulating cool air throughout the unit. The innovative fan system fits like a glove on the side of the reservoir.

### AHEAD OF THE CURVE

While other cloning machines are designed with straight lines, the TurboKlone has sleek, rounded edges and curved walls that give it greater strength and resilience from external and internal forces. And those curves aren't just for good looks! Its sleek, rounded design makes cleaning the TurboKlone a breeze! No worry about bacteria hanging around in tight corners.

### MORE IS BETTER

Why settle for less when you can have more. Klone sites that is! TurboKlone gives at least 60% more than other systems on the market. The best part? You get more sites without taking up more space!

- Longer lasting, durable Polyethylene colored klone collars – visually differentiate plant species using a color coded pattern determined by you.
- Strong and easy to clean reservoir
- Fan system provides constant oxygen and keeps temperatures optimal for rooting
- More Klone sites in the same dimensional footprint as other systems on the market.
- Grey ABS plastic shell – less heat absorption from lights above, as well as greater reflective properties to promote efficient growth.
- Alpha/numeric lid – categorize different plant species with ease.
- Dome with integrated vents – allows you to adjust the humidity level within the dome and provide more control.
